ALPHA

<sup>^</sup>Compared to interchangeable-lens digital cameras. As of the November 2023 product announcement. Sony survey.

scan here to  
know more

**Exmor RS**  
CMOS Sensor

## Newly developed full-frame stacked 24.6 MP Exmor RS™ image sensor with global shutter

The new full-frame global shutter image sensor is equipped with 24.6 million effective pixels, a stacked CMOS architecture and integral memory.

## BIONZ XR image processing engine

With up to eight times\* more processing power than previous versions, the BIONZ XR image processing engine minimises processing latency while markedly boosting image processing power.

## 120 fps Blackout Free Shooting

Never miss a moment thanks to the blackout-free viewfinder, which does not black out even during fast-paced continuous shooting.

## Continuous Shooting Speed Boost

Continuous Shooting Speed Boost\* temporarily boosts the shooting speed while shooting bursts, enabling the user to raise the frame rate to 120fps

# α9 III **NEW**

## THE WORLD'S FIRST<sup>^</sup> FULL-FRAME CAMERA WITH A GLOBAL SHUTTER SYSTEM

**MRP Rs. 5,29,990/-**

<sup>^</sup>Compared to interchangeable-lens digital cameras. As of the November 2023 product announcement. Sony survey.

## Capture essential moments with innovative high-speed burst support

Never miss a key event with Pre-Capture\*, which makes it possible to capture moments that occurred before the shutter was released.

## Ultra-fast 1/80000\* second shutter speed

Capture all the fast-paced action at sporting events and more.

## Flash sync at all shutter speeds

With a compatible flash unit from Sony (such as the HVL-F60RM2 or HVL-F46RM)\*, the α9 III can perform full flash synchronisation right up to the maximum 1/80000\*\* second shutter speed.

# α9 III **NEW**

**THE WORLD'S FIRST<sup>^</sup>  
FULL-FRAME CAMERA WITH A  
GLOBAL SHUTTER SYSTEM**

**MRP Rs. 5,29,990/-**

## 4K 120p\* without cropping for the first time in an α body

For the first time in the Alpha line-up from Sony, the α9 III offers 4K (3840 x 2160) 120p movie recording without cropping, allowing users to utilise the full angle of view provided by any lens.

# THE TECHNOLOGY BEHIND

## ED/ Super ED Glass

Reduces Chromatic Aberration

ED/Super ED Glass dramatically improve chromatic aberration at telephoto ranges, and provide superior contrast across the entire image, even at large aperture settings.

## Aspherical Lens

Maintain High Sharpness & Contrast

"Aspherical" elements can restore alignment at the image plane, maintaining high sharpness and contrast even at maximum aperture and reduce distortion.

## XA Element

Suppresses Sagittal Coma Flare

New XA lens elements achieve extremely high surface precision by innovative manufacturing technology, for an unprecedented combination of high resolution and the most beautiful bokeh.

## [FE] Fluorite Element

Lightweight Without Compromise

Fluorite lens provide enhanced compensation for chromatic aberration. Fluorite is also lighter than normal optical glass, contributing to reduced overall lens weight.

## [DMR] Dust & Moisture Resistant

Durable Structure

The lens is designed to be dust and moisture resistant\*, ensuring reliable operation when shooting outdoors in challenging conditions.

\*Not guaranteed to be 100% dust and moisture proof.

## Circular Aperture

Natural & Round Bokeh

A unique design that keeps the aperture almost perfectly circular from its wide-open setting to when it is closed by 2 stops. Smoother, more natural defocusing can be obtained as a result.

## [Floating F] Floating Focusing

Maintain Sharp, High-resolution Rendering

The floating focus mechanism achieves consistent high resolution from infinity to the closest focusing distance and helps to reduce all types of aberration.

## [IF] Internal Focusing

Fast & Short Minimum Focusing Distance

Middle or rear groups of the optical system are moved to achieve focusing, which leaves the total length of the lens intact. Benefits include fast autofocus and a short minimum focusing distance.

## [IZ] Internal Zoom

Constant Lens Length

The length of the lens remains constant while zooming, and the barrel does not rotate so polarisers and other position-dependent filters can be used without the need for additional support.

## [LR MF] Linear Response MF

Fast & Accurate Manual Focusing

The focus ring features high control resolution so that user input is precisely followed when focusing manually. The focus changes linearly in response to focus ring rotation.

## [OSS] Optical Steadyshot

Easier Handheld Shooting

The provided Optical Steadyshot modes make it more convenient to capture sharp images in handheld shooting under various conditions

## [OSS Mode] Optical Steadyshot Mode

Selectable Stabilization Mode

An OSS mode switch lets you choose mode 1 for general image stabilization, Mode 2 for panning movements, and Mode 3 for emphasizing framing stability when shooting moving subjects.

## [F Coating] Fluorine Coating

Repels water & Grease

The exposed front element is covered with a fluorine coating that repels contaminants. Any water or oil based grime can be easily wiped away.

## Nano AR Coating

Suppresses Flare & Ghosting

Nano AR Coating technology produces a lens coating that suppresses reflections that can cause flare and ghosting for consistently high contrast and clarity.

## Nano AR Coating II

Minimize Flare & Ghosting

Nano AR Coating II is evenly applied to large lens elements or highly curved element surfaces, that suppresses internal reflections which causes flare and ghosting.

## [XD LM] XD Linear Motor

Fast Accurate Auto-focus

The XD LM has been developed to deliver higher thrust and efficiency than previous types, in order to make the most of the rapidly evolving speed performance of current and future camera bodies.

## [DDSSM]

Direct Drive Super Sonic Wave Motor

Quiet & Precise Auto-focus

DDSSM system is used for precision positioning of the heavy focus group required for the full-frame format, allowing precision focusing. The system is also remarkably quiet and ideal for movie shooting.

## [RDSSM]

Ring Drive Super Sonic wave Motor

Smooth & Silent AF Operation

A piezoelectric motor contributes to smooth and silent AF operation. This produces high torque at slow rotation and provides immediate start and stop responses, and it contributes for silent autofocus.
